

Wind Asset Management Solution

We understand how frustrating it is when there are gaps in your bankable data and the impact this has on your wind monitoring campaign. Our aim is to help you achieve the best possible financial outcome for your project.

ART's Wind Asset Management Solution is designed to maximise your uptime and provide risk management support, by giving you the peace of mind that your wind assets are being monitored and maintained to the highest standard.

We have developed a unique subscription-based Wind Asset Management Solution by combining real-time sensor monitoring with a multi-tiered managed service tailored to suit your needs, all delivered by our dedicated inhouse teams.

ART's national reach, proven track record and specialist industry experience means we can reliably deliver this Australian first industry-leading solution.

WindPulse

WindPulse is ART's real-time wind sensor monitoring software solution designed to monitor the pulse of your wind campaign, by giving you the visibility to ensure that your mast sensors are functioning at their optimal level.

Too often wind assets are built and then forgotten. Only when the data is needed are faults noticed, and data could have been lost for months or even years. This is where WindPulse comes in, its real-time dashboard gives you visibility of all your sensors. You have access to daily and weekly

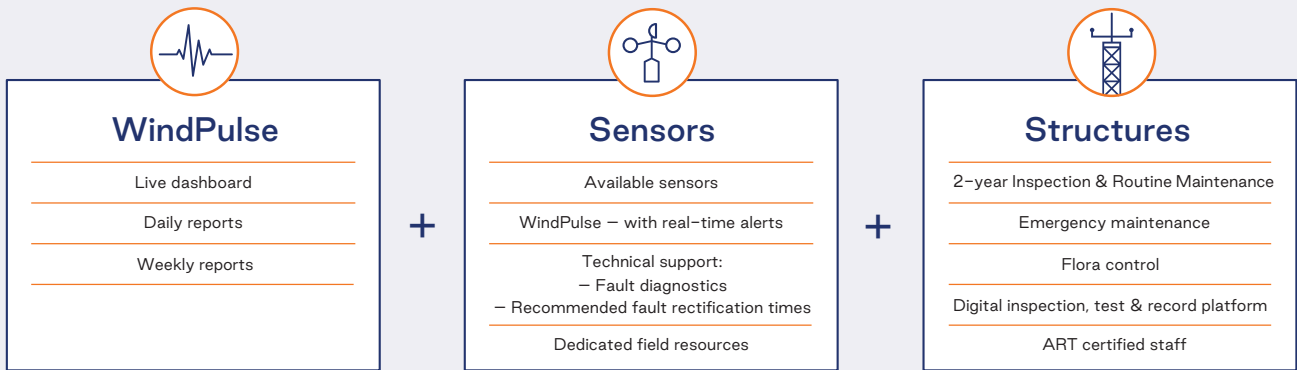

reports as well as the option to add on monthly reports, downloadable data and quoted call outs.

If an error does occur with one or more of your sensors, you will see the error in your dashboard or in your daily and weekly emails, reducing the need for internal monitoring and freeing up your resources.

WindPulse also gives you the ability to graph a visual comparison of sensors on the same mast or on different masts.

Comprehensive managed service package

Managed service

ART's managed service is a unique customer focused solution that can be tailored to suit your wind campaign's requirements, by allowing you to choose the service package you need.

There are multiple packages to select from, each package is specifically designed to cover all the maintenance needs of your assets and ensure maintenance cost efficiencies are realised.

Sensors package – incorporates WindPulse with the added benefit of receiving real-time smart alerts notifying you of an error. One of ART's dedicated technical support team will be in contact after an alert to discuss service options, including fault diagnostics and recommended fault rectification times. In addition, you have access to dedicated field resources and sensor availability, with an ART commitment of a four-week rectification resolution timeline or onsite labour is free.

You also have the option to add on extras including downloadable data, agreed call out fees and scheduled sensor replacement.

Structures package – includes one I&RM (Inspection, and Routine Maintenance) with ART I&RM certified staff, fixed cost emergency

maintenance rates and flora control. Your site will also be added to our digital inspection, test and record platform so that we can ensure cost efficiencies are realised. Optional extras include WindPulse, agreed call out fees, additional I&RM and access track management.

But you don't have to just select one package, choose the full comprehensive package which combines sensors and structures including best practice for all rectification requirements and reduced mobilisation costs.

About us

ART designs, manufactures, installs, and maintains turnkey infrastructure solutions for wind resource assessments, as well as for the broader renewables, resources and communications industries.
